PLATFORM USER GUIDE

Impact Reports User Guide

How to browse the public site, and how staff create, review, and publish impact reports through the admin dashboard.

Version 1.0

Prepared September 2026

Audience: public visitors, editors, viewers, and superadmins

Guide Roadmap

This guide has three parts:

- **Part 1 — Public Website**: for anyone browsing reports, searching, and viewing the locations map. No login required.
- **Part 2 — Staff Dashboard**: for editors and viewers who log in to draft, edit, and review reports.
- **Part 3 — Superadmin Guide**: additional sections available only to superadmins — user management, taxonomy data, subscribers, and platform-wide settings.

Roles at a glance

Role	Can do
Superadmin	Everything: all reports, user management, data management, subscribers, all platform settings, log export/purge
Editor	Reports they're assigned to (create/edit); personal 2FA setup; Overview and Reports and Settings sections only
Viewer	Read-only access to reports they're assigned to or asked to approve; same section visibility as Editor

PART 1

The Public Website

1. Browsing Reports on the Homepage

The homepage (the portal) is where anyone can browse published impact reports — no account needed.

What's on the homepage

- **Hero banner** with the site title and a "Verified Transparency" badge.
- **Impact numbers** — three stat cards showing Countries Supported, Projects Delivered, and Total Lives Impacted, calculated from all published reports.
- **"Explore Our Global Reach"** — a small preview map with a **View interactive map** button that opens the full Locations Map page (see §3).
- **Search bar** — type a country, region, sector, or year to get live suggestions as you type.
- **Filters** — on desktop, a sidebar with four collapsible groups: *Countries, Regions, Sectors, Years*, each a checkbox list. On mobile, the same filters appear as a filter bar with a slide-up sheet. Use **Expand**/**Collapse** to open or close all groups at once, and **Clear all filters** to reset.
- **Results** — a grid (or list — toggle in the results toolbar) of report cards, each showing the title, a short summary, region, year, sector, and impact number. Click any card to open the full report.

> Filter and search selections are saved in the page's URL, so you can copy the link and share a specific filtered view with someone else.

Searching

Click **Search Reports** in the header (or the floating red search button) to open a full-screen search overlay. Type at least a couple of characters to see live matches, each labeled by type — Project ID, Country, Region, Sector, Year, or a specific report. Selecting a report result opens it directly; selecting any other type applies that as a filter back on the homepage. Press `Esc` to close the search, or `Enter` to jump to the first suggestion.

2. Reading a Report

Every report page (`/report/...`) is built from the same set of sections — though not every report shows every section, since editors can choose to hide fields that don't apply to a given project.

Section	What it shows
Hero	Report title, short summary, region / year / sector, and a "Verified Report" badge
Stat tiles	Up to three headline numbers: Lives Impacted, Countries Reached, Active Locations
Executive Summary	Project ID, sector(s), operational region, and two collapsible write-ups: Project Background and Strategic Response
Project Deliverables	A list of what was delivered and in what quantity (only shown if the report has any)
Implementation Timeline	A vertical timeline of project milestones
Recipient Demographics	A sidebar breakdown (e.g. Men / Women / Children percentages)
Testimonial	A quote card; if there's more than one, arrows and dots let you page through them
Field Documentation	Photos and video from the field — click any thumbnail to open a full-screen gallery with arrow navigation, swipe support, and captions
Project Countries	A list of countries involved, with a map you can click through to fly to each one
Locations Implemented	Every specific project site, viewable as a grid, list, or map, with per-country filter pills when a report spans several countries
Call to action footer	A donate button (if a donation link is set for the report) and a "Share Report" menu (Facebook, LinkedIn, X, WhatsApp, or Copy Link)

3. The Interactive Locations Map

Visit **/locations** (or click "View interactive map" from the homepage) to see every country the organization has worked in.

- A **country list** on the left shows every country with a report count. Clicking one highlights it on the map and filters the page.
- The **map** on the right shows one pin per country — click a pin the same way you'd click a list entry. Clicking the same country again deselects it; a "Show all" link also clears the selection.
- Selecting a country reveals a **"Reports in [Country]"** grid further down the page, with the same grid/list toggle as the homepage.
- A separate section further down plots individual **project sites** (not just country-level pins) across all published reports.

4. Subscribing for Updates

The footer on every public page has a **Stay Connected** box — enter an email address and click **Join** to subscribe to updates. A green confirmation appears on success; a duplicate or invalid email shows an inline error. The footer also links to the organization's social media accounts (only platforms with a configured link are shown) and displays contact information.

PART 2

The Staff Dashboard

5. Logging In

Staff sign in at **/alkabirimpact/login**.

1. Enter your **username and password** and submit.
2. If your organization requires two-factor authentication, you'll be asked for a second code:
   - **Email OTP** — a 6-digit code is emailed to you; enter it in the six boxes provided (typing the last digit — or pasting the whole code — submits automatically). Use **Resend** if it doesn't arrive.
   - **Authenticator app (TOTP)** — enter the 6-digit code from your authenticator app.

   You have 5 attempts within a 15-minute window before you're temporarily locked out.
3. On success you land on the dashboard **Overview**.

Forgot your password?

1. Click the forgot-password link and enter your email — a 6-digit reset code is emailed to you (valid 10 minutes).
2. Enter the code to verify it.
3. Choose a new password (and confirm it) — must be at least 6 characters, or must meet the organization's stronger password policy if that's enabled.
4. You're returned to the login screen automatically after a few seconds.

> There is currently no in-dashboard "change password" screen for day-to-day password changes — use the forgot-password flow from the login page any time you need to reset it.

Accepting an invitation

If a superadmin invites you, you'll receive an email with a registration link to **/alkabirimpact/register**. The page shows your invited email, role, and region. Choose a username (3+ characters) and a password (with a live checklist if strong passwords are required), then click **Create Account**. The link expires after 48 hours.

6. The Dashboard Layout

After logging in you'll see a sidebar (navigation), a top bar, and the main content area.

- **Sidebar** — links to the sections your role can access (see the roles table above). Superadmins additionally see a small system-status panel at the bottom.
- **Top bar** — shows the current section, a **notification bell** (checks every 60 seconds; click to see recent alerts and mark them read), and your user menu (avatar, username, role, **Sign Out**).
- **Overview** — your dashboard home. Editors/viewers see a summary of their own assigned reports and activity; superadmins see organization-wide stats, recent activity log, active regions, and platform configuration, plus a data-export shortcut (see §11).

> If you're idle for longer than the configured session timeout (default 30 minutes), you'll be signed out automatically and need to log back in.

7. Creating and Editing a Report

Open the **Reports** section from the sidebar to see the report list (ledger) — searchable, filterable by status, and sortable, with pagination at the bottom.

Starting a new report (editors/superadmins)

Click **New Report** to open the creation form:

Field	Notes
Project Name	Required. As you type, existing project names are suggested — pick an existing one if you're adding a follow-up report to the same project.
Actual Project ID	Required — your organization's own reference code, e.g. "Burma Water 1001".
Assigned To	Required — the editor(s) who can edit this report.
Approval Reviewer	Required — who must sign off before it publishes (see §9).

Click **Create & Fill Details** to save it and open the 5-step wizard.

The 5-step wizard

A step indicator across the top shows all five steps; you can click back to any already-completed step. Each step has its own **Save & Next** button — your work is saved as soon as you click it, so you can safely close the wizard and come back later. The final step's button is **Submit Report**.

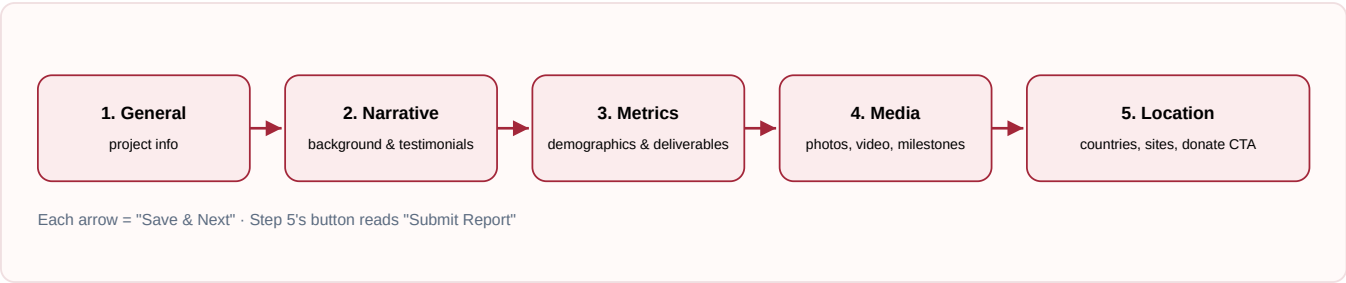

Figure A — The report wizard's five steps.

Step 1 — General

Field	Notes
Program Lead, Implementing Partner	Required text fields
Partner Organization(s)	Optional free text, e.g. "Red Crescent, WFP, local NGOs"
Short Subtitle	Optional — shown on the report card and hero
Reporting Period	Required
Region	Required, single choice from the organization's region list
Sector	Required, multi-select
Lives Impacted	Required number, minimum 1
Cost	Optional number

Project Name, Assigned To, and Approval Reviewer can only be changed here by a superadmin.

Step 2 — Narrative

Project Background and **Strategic Response** are both required rich-text fields — use the toolbar to format text, add links, etc. Below them, add one or more **Testimonials** under a custom section title.

Step 3 — Metrics

- **Demographics** (optional) — add rows of a category name and percentage; a running total bar turns red if the percentages exceed 100%.
- **Custom Deliverables** (required) — add rows of a metric label (e.g. "Solar Wells"), a count, and a short description, each with its own icon.

Step 4 — Media & Timeline

- **Field Documentation Images** (required, up to 10) — paste an image URL or upload a file (JPEG/PNG/WebP/GIF, max 2 MB — larger files are rejected with an error). Use the star/bookmark button on one image to set it as the report's thumbnail on the homepage. At least one image must remain; the "Add Image URL" button disables once you hit 10.
- **Video URL** (optional) — a YouTube, Vimeo, or direct video link.
- **Project Milestones** (optional) — add a date/timeframe, title, and rich-text note per milestone. Leave this empty for projects without a linear timeline; the public page simply hides the Implementation Timeline section when there are none.

Step 5 — Country & Location

- **Project Countries** (required) — search and select every country involved.
- **Locations Implemented** (required per country) — pick states/provinces where available, or use the map picker to drop a pin manually for exact coordinates.
- **Support This Mission (donate CTA)** (optional) — a customizable section title, button text, description, and donation/volunteer link shown at the bottom of the public report.

Hiding a field from the public page

Almost every field has a small pill next to it reading **Visible** (green, eye icon) or **Hidden** (gray, eye-off icon). Click it to toggle whether that field or section appears on the published report — useful for fields that don't apply to a particular project. This never deletes the data, it only hides it from public view.

Publishing without an approver

If a report has no Approval Reviewer assigned, it publishes automatically the moment all five steps are completed — there's no separate "publish" button in that case.

8. The Report List

The Reports section list (ledger) lets you search, filter by status (with a live count per status), and sort. Active filters appear as removable pill chips with a result count, and a **Clear filters** link appears whenever a filter is active. Checkboxes let you select multiple reports at once for bulk actions (superadmins only) — **Move to Trash** normally, or **Delete Permanently** while viewing the Trash tab; both require a confirmation step, and permanent deletion cannot be undone.

9. Reviewing and Approving a Report

If you're listed as the **Approval Reviewer** on a report that has completed all five steps, opening it shows a blue banner: *"You are the approval reviewer for this report. Review all steps, then approve on the last step to publish."* Step through the wizard using **Next** (the fields are read-only for you) and, on the final step, click **Approve & Publish**. This publishes the report immediately and returns you to the list.

An assigned editor who isn't the approval reviewer sees the same report in read-only mode while it's pending approval — they can review it but can't approve it themselves. Superadmins can always edit, regardless of approval state.

10. Personal Security Settings

Every staff member has access to a **Personal Security** card in Settings, where you can set up or remove two-factor authentication via an authenticator app (TOTP) — scan the QR code shown, then confirm with a code from your app.

PART 3

The Superadmin Guide

11. User Management

Open **User Management** from the sidebar to see the directory of all staff accounts — searchable, filterable by active/inactive status, paginated.

Inviting a new staff member

Click **Invite User** and fill in:

Field	Notes
Email Address	Required — the invitation is sent here
Role	Editor (default), Viewer, or Superadmin
Department	Required, chosen from the organization's department list

Click **Send Invite**. The invitee gets a registration link valid for 48 hours (see §5).

Editing an existing user

Click the pencil icon on a user's row to change their Username, Email, Role, or Department, then **Save Changes**. From the row actions you can also toggle a user active/inactive (deactivated users can't log in) or delete their account.

12. Data Management (Taxonomy)

Open **Data Management** to edit the three lookup lists used throughout the platform: **Regions**, **Sectors**, and **Departments**. Add or remove entries freely, then click **Save Changes**.

> At least one region and one sector must always remain, and duplicate entries within a list are rejected. Because these lists are freeform, it's worth agreeing on naming conventions with your team (e.g. always use region names, not individual country names) — the system won't stop a superadmin from entering something inconsistent.

13. Subscribers

Open **All Subscribers** to see everyone who signed up via the public site's newsletter box — searchable by email, with the join date and time for each. Use the delete icon on a row (with an inline Yes/No confirm) to remove a subscriber, or **Refresh** to reload the list.

14. Platform Settings

Open **Settings** — as a superadmin you see several cards in addition to your own Personal Security card:

Security

- **Require 2FA** — forces two-factor authentication for every staff login, org-wide.
- **Enforce strong passwords** — requires 12+ characters with symbols and numbers on password reset/registration.
- **Session timeout** — how long staff can be idle before being signed out (15/30/60/120 minutes).

General

Default Region, **Timezone**, and **Currency** defaults used across the platform.

Notifications

Toggles for email alerts, the weekly digest email, and failed-login warning notifications.

Donation Link

A single URL — this becomes the "Donate" button in the public site header. Leave it blank to hide that button entirely.

Hero Section

The title text and background photo shown on the public homepage banner. You can paste an image URL or upload a photo directly (max 2 MB).

Social Media Links

Facebook, X, Instagram, LinkedIn, and YouTube URLs, each with its own visibility toggle controlling whether that icon appears in the public footer.

15. Exporting Data & Managing Logs

In the **Danger Zone** card of Settings (and also from the Overview page's export control):

- **Export all data** — choose CSV or Excel to download all reports as `reports-export-{date}.csv` or `.xlsx`.
- **Purge audit logs** — permanently deletes activity log entries older than one year, after a confirmation dialog; the resulting toast shows how many were deleted.

From the Overview page, superadmins can also choose an export time range (1 Year / All History / Custom range) before exporting activity logs.
